

# **Benelli .22 cal Problems/Questions & Solutions/Answers**

## **Feeding**

**Problem:** I'm having feeding problems.

**Solution:** Have you cleaned your chamber?

If yes, have you done it correctly and thoroughly? 9 out of 10 feeding problems can be remedied by cleaning your chamber. When cleaning your chamber, use a **.25 caliber** brush bent in the shape of an L. Twist the brush to clean. Next, spray Brake-free oil on your patch and pull it through barrel. When the chamber is clean, you should be able to remove the slide, stand the pistol up on end and drop a round into the chamber. If the round has to be pushed into the chamber, continue cleaning and/or send your pistol in for service.

**Solution:** Have you tried different ammunition?

We recommend 40 grain, standard velocity, round nose ammunition. A round with a truncated nose can create feeding problems. **We have found that European ammo is more consistent.** Suggestions: SK, Wolff, Eley, Lapua, RWS

**Solution:** Is your firing pin broken? A broken firing pin may continue to fire cartridges, but occasionally prevent feeding.

**Solution:** Is your buffer cracked, broken or missing? Part #065P new number LGI065P If the buffer appears "beat up" change the recoil spring at the same time. Part # 049P.

## **Firing**

**Problem:** My gun is misfiring; I hear a click.

**Solution:** Have you cleaned your chamber?

If yes, have you done it correctly and thoroughly? 9 out of 10 firing problems can be remedied by cleaning your chamber. When cleaning your chamber, use a .25 caliber brush bent in the shape of an L. Twist the brush to clean. Next, spray Brake-free oil on your patch and pull it through barrel. When the chamber is clean, you should be able to remove the slide, stand the pistol up on end and drop a round into the chamber. If the round has to be pushed into the chamber, continue cleaning and/or send your pistol in for service.

**Solution:** Is the firing pin denting the case when the hammer falls?

If yes, are you getting light or heavy hits?

If the case dents are heavy, odds are your problem is with the ammunition. You should try a few different brands/lots. We have found that **European ammo is more consistent.** Suggestions: SK, Wolff, Eley, Lapua, RWS

If the case dents are light, odds are your chamber may be in some way too tight for your ammunition. If you are sure your chamber is clean, try different ammunition.

**Problem:** My gun is failing to fire; I don't hear a click.

**Solution:** If the pistol is going into battery, but won't fire, send your trigger unit for inspection.

**Problem: My gun is double-firing; I pull the trigger once and get more than one shot.**

**Solution:** Have you cleaned your chamber?

If yes, have you done it correctly and thoroughly? 9 out of 10 firing problems can be remedied by cleaning your chamber. When cleaning your chamber, use a .25 caliber brush bent in the shape of an L. Twist the brush to clean. Next, spray Break-free oil on your patch and pull it through barrel. When the chamber is clean, you should be able to remove the slide, stand the pistol up on end and drop a round into the chamber. If the round has to be pushed into the chamber, continue cleaning and/or send your pistol in for service.

**Solution:** Have you tried different ammunition?

We recommend 40 grain, standard velocity, round nose ammunition. A round with a truncated nose can create feeding problems. We have found that European ammo is more consistent. Suggestions: SK, Wolff, Eley, Lapua, RWS

**Solution:** Is your firing pin broken? Check fired cases for firing pin strikes. If you have fired cases with no indent from the firing pin. If the pistol is slam-firing discontinue use and send you pistol for service

## Ejecting

**Problem: I'm having ejecting problems.**

**Solution:** Have you checked your extractor for damage? If in doubt, send in the bolt for inspection.

**Solution:** Have you cleaned your chamber?

If yes, have you done it correctly and thoroughly? 9 out of 10 ejecting problems can be remedied by cleaning your chamber. When cleaning your chamber, use a .25 caliber brush bent in the shape of an L. Twist the brush to clean. Next, spray Brake-free oil on your patch and pull it through barrel. When the chamber is clean, you should be able to remove the slide, stand the pistol up on end and drop a round into the chamber. If the round has to be pushed into the chamber, continue cleaning and/or send your pistol in for service.

**Solution:** Is your ammunition strong enough to cycle the slide?

We recommend 40 grain, standard velocity, round nose ammunition. We have found that European ammo is more consistent. Suggestions: SK, Wolff, Eley, Lapua, RWS

**Solution:** Check buffer and recoil spring for wear.

## Accuracy

**Problem: I'm having accuracy problems; my shots are rarely/sometimes/always all over the place.**

**Solution:** Have you cleaned your chamber?

If yes, have you done it correctly and thoroughly? When cleaning your chamber, use a .25 caliber brush bent in the shape of an L. Twist the brush to clean. Next, spray Brake-free oil on your patch and pull it through barrel. When the chamber is clean, you should be able to remove the slide, stand it up on end and drop a round into the chamber. If the round has to be pushed into the chamber, continue cleaning and/or send your pistol in for service.

**Solution:** Is there lead buildup in the barrel?

If yes, clean your barrel. Lead buildup, or leading, can tear up your bullets. This can cause them to slow down and want to move sideways. After cleaning your chamber, you should clean your barrel with bore solvent, brush and a patch. Only use a brush in your barrel to remove lead buildup. Don't forget to inspect the muzzle crown for build up. #00 steel wool is good for cleaning the crown.

**Solution:** Have you tried different ammunition?

We recommend 40 grain, standard velocity, round nose ammunition. We have found that European ammo is more consistent. Suggestions: SK, Wolff, Eley, Lapua, RWS

## **Trigger**

**Question:** Can I shorten my trigger pull, the length of travel from slack to over-travel?

**Answer:** No. If you have the MP95 you can adjust the amount of slack and first stage weight. If you have the MP90, you can adjust for over travel, second stage weight and trigger tongue position.

**Question:** How light can I get my trigger?

**Answer:** The lightest we will set your trigger is 2lbs. Both the standard and adjustable triggers will go as heavy as 3 ½lbs.

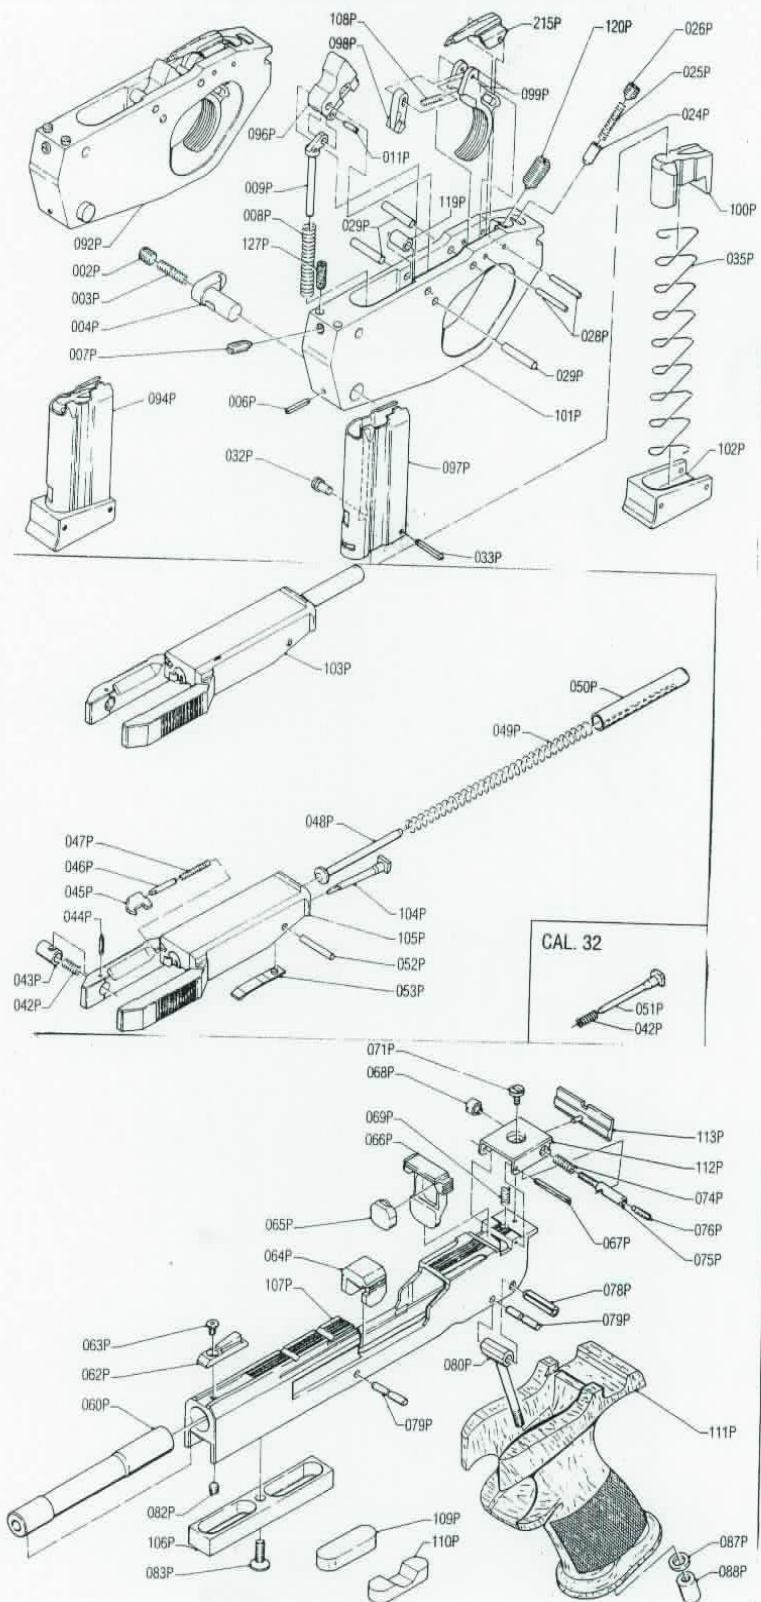

If you are still having issues with your pistol and need to send it in for repair, we ask that it is accompanied by a note regarding the problem with a good daytime phone to reach you at, shipped in a hard case, and include your magazines. Please allow 6 to 8 weeks for all repairs:

**DO NOT USE POSTAL SERVICE.**

**DO NOT SHIP AMMO IN THE SAME PACKAGE AS THE PISTOL.**  
**IT IS GOOD TO SEND YOUR MAGAZINES WITH THE PISTOL.**

Shipping address for Larry's Guns:
