- Positive stop indexing adjustments - Lightweight carbon fiber and aluminum.
- Collar and locking ring can be bored to any diameter up to 1.00in or 25.4mm

**PRICE \$305 - \$325**

### Details

Adding a tuner can benefit your rifle by increasing the sight radius as well as tuning your barrel to reduce vertical shift from ammunition. All aluminum components are machined from 7075-T6 aircraft grade aluminum and are anodized and dyed black after machining. All models feature a positive stop click type adjustment system with numbered setting marking. The Turbo Tuner has a V-style locking collar that facilitates easy removal and replacement of the tuner on the barrel. The V-style locking collar also allow the tuner to be installed 180 degrees from its original position while maintaining the linear location of the adjusted weight relative to the muzzle.

**Made in the USA**
